

MORAVIAN STUDENT BBP EXPOSURE FLOWCHART (NEEDLESTICK/SHARP/SPLASH) EVALUATION GUIDELINES

Significant exposure is defined as *direct contact* with blood or certain body fluids (semen, vaginal secretions, CSF, peritoneal fluid, pleural fluid, amniotic fluid, synovial fluid) or any body fluid containing *visible* blood. Direct contact includes percutaneous injury (needlestick, cut from sharp object), mucous membrane exposure (splash to eye) and exposure of skin that is chapped, abraded, afflicted with dermatitis or involves an extensive area or of prolonged duration.

Care of the exposed student/completion of forms:

HIV: Provider informs student of source rapid HIV; if positive, provider contacts ID to discuss PEP
 Hepatitis B: Review vaccine status; if indicated give Hepatitis B shot and/or HBIG
 Tetanus: Review vaccine status; if indicated give TDAP (≥ 5 years)
 Certificate of Significance: if used, complete (provider & student must sign) and provide copy to student

Notify/instruct student to contact Moravian University Health Center within 72 hours to review
