CLINICAL REMEDIATION
Clinical competencies are graded as Pass/Fail. Students must pass both the theory/seminar and clinical components of specialization courses in order to be successful in the program. Failure in any of the clinical components of the course may be considered for clinical remediation only once throughout the program, and only under the recommendation of the MSN Program Director, clinical faculty, and preceptor.

Students who are not meeting course requirements for clinical competency may have a Memorandum of Understanding (MOU) developed at the discretion of the instructor and program director. The student will be responsible for additional fees that incur in order to carry out the MOU. ($1000/50 hours of remediation)
